

## **2025 Ohio Historical Records Advisory Board Final Grant Report**

April 29, 2026

**Institution:** City of Toledo

**Project:** Archiving Toledo's Early History: Plat Maps from the 1880s

### **Project Director(s)**

Julie Gibbons, Clerk of Council, Julie.Gibbons@toledo.oh.gov  
Laura Shaffer, Grants Coordinator, Laura.Shaffer@toledo.oh.gov

### **Project Summary**

The City of Toledo's project proposed to scan approximately 660 pages of hand-drawn linen plats from the 1880s. Each plat page measured approximately 27" x 30" and were bound in 11 hard cover books, with approximately 60 maps to a book. The City entered into a contract with the Toledo Lucas County Public Library (TLCPL) Local History and Genealogy Department for disbinding, digital scanning, and quality control and metadata services. The City delivered hard cover books to the Library in July 2025. As of August 31<sup>st</sup>, 2025, 334 pages had been scanned, resulting in 220 images.

However, on August 29<sup>th</sup>, 2025, this project suffered a significant setback. Visual identification of possible mold on one of the volumes triggered contaminants testing, which revealed levels of black mold and other contaminants on one of the volumes. The Toledo Lucas County Public Library does not possess the resources to work on items with this level of contamination; therefore, the project was put on hold pending further testing and mitigation services. The City worked with the Library to identify a qualified contractor for these services that would be able to perform an assessment on the materials within the project period. Ultimately, the Conservation Center for Art & Historic Artifacts (CCAHA) in Philadelphia, Pennsylvania was selected to perform the service. Due to high estimated costs (over \$1000 per volume for safe shipping, assessment, and remediation) the City decided to reduce the scope of the project and focus on preserving a single plat volume that was representative of the project as a whole. The City consulted with OHRAB regarding this reduction in scope and after given approval to move forward, identified a book for assessment. As a project period extension had previously been requested and approved due to delays in contract execution, no additional extension was requested at this time.

The City selected Volume H, a book comprised of 27 leaves containing 141 maps of additions, expansions, and subdivisions platted during Toledo's years of rapid growth during the 1880s and 1890s. CCAHA completed a Condition Report with the following findings: The volume's covers are constructed of brown, grained cloth and stamped leather borders over paper board and the interior leaves are heavy machine-made paper, lined with cloth and illustrated with black printing ink, blue and red writing inks, graphite, and blue and red watercolor. No mold was detected and the volume was deemed safe to handle with minor surface cleaning recommended. Upon receiving confirmation from CCAHA that the material was safe to handle in non-laboratory

settings, the volume was returned to the Library for final quality control and metadata, which was completed swiftly. The Library delivered 30 TIFF images to the City in March 2026.

Upon receipt of the scanned images, the City's Marketing and Communications Department created a webpage to host the plat maps in an image gallery. The City's Office of Grants and Government Affairs performed historical research and created an index for the webpage that allows viewers to locate each plat by the current neighborhood in which it falls. These include the historically and culturally significant neighborhoods of Birmingham, Englewood, Junction/Onyx, the Old West End, and East Toledo and demonstrates the changes that urban renewal and highway expansion brought to these areas of Toledo in the mid-20<sup>th</sup> century. Preserving the beauty of the hand drawn plats honors the skill and artistry of the individuals who took part in their creation and the vision that went into planning the expansion of Toledo. The webpage was launched in late-march 2026. The 30 digitized TIFF files are stored in the City's cloud-based storage.

While the project was not completed to the originally intended scope, the partnership of the City, the Library, and CCAHA was able to deliver a meaningful final product that we hope will inspire future preservation efforts, both for the remainder of these historical plat volumes and additional materials in the City's archives.

## **Objectives**

The identification of contaminants on one of the volumes caused a significant delay in the project's progress and severely curtailed the scope of the project. Nearly six months passed between initial detection of contaminants and the assessment and return of Volume H, which was ultimately deemed safe for the Library to handle. This also required a significant shift in project budget, which had to be adjusted due to unanticipated assessment and shipping costs. Contracted services costs decreased due to reduction of the number of pages the Library digitized. The change in project objectives also caused a shift in City staff who contributed in-kind time to the project. These changes have been clearly identified in the final project budget, which has been submitted along with this report.

While the project was not completed in the original intended scope, the volume that was preserved provides invaluable insight into the growth and history of Toledo and sparked significant interest from local media. The City also credits the partnership and expertise of the Toledo Lucas County Public Library as a critical factor in ensuring that this project was completed within the extended performance period and subsequent conversations with the Library have indicated both the desire and enthusiasm to one day complete the project.

### *Objective 1: Scanning*

The City was only able to completely deliver 30 pages out of the estimated 660. 190 additional images have been scanned, but metadata and quality control were not able to be performed on the items without a professional assessment, which the budget of the project did not allow for. Nine additional volumes have not been scanned, as the project was halted before work on these volumes began. See below for a detailed breakout of the work completed on each plat volume.

## Objective 1 Outcomes

One (1) Volume Fully scanned, with Quality Control and Metadata

- Book H, circa 1880s, 30 images

Two (2) Volumes Fully Scanned, without Quality Control and Metadata

- Providence/Waterville Township, 55 images
- Oregon Township, 61 images

Three (3) Volumes Partially Scanned

- Volume A, 34 images scanned, 4 pages unscanned
- Volume D, 29 images scanned, 2 pages unscanned
- Town and Village Plats of Townships, 11 images scanned, unknown number of pages unscanned due to halt in project.

Nine (9) Volumes Unscanned - page counts unknown

- Volume B
- Volume C
- Volume E
- Volume F
- Volume G
- Richfield/Spencer Township
- Springfield/Sylvania Township
- Unlabeled Volume
- Auburndale Annex, unscanned due to fragility and mold.

## *Objective 2: Digital Preservation*

The City was able to complete the digital component of this project, a webpage onto which high resolution digital scans of each page of the completed plat volume have been made available and searchable to the public via the City of Toledo's website. City staff meticulously cataloged each plat map and its corresponding modern neighborhood in an index on the webpage. Screenshots of the webpage have been attached at the end of this report and the page is accessible via the following link:

<https://toledo.oh.gov/departments/plan-commission/toledo-plat-maps>

## **Project Impact**

Due to the positive response of local media, as well as the ease of partnership with and interest from the Toledo Lucas County Public Library, the City believes that projects of this type should be prioritized and pursued in the future. The City has demonstrated its ability to easily host archival material through its website and provide the public with access to its archived materials.

As the project was completed too close to the due date to show site visitorship, the City is unable to report webpage analytics that occurred within the project period; however, in the month since the webpage went public, approximately 500 active users have visited the website.

The City plans to pursue future grant opportunities to complete this project and is engaged in conversations with the Library to complete the five volumes which were scanned, but for which quality control and metadata could not be completed, approximately 190 images.

### **Press Release and Local Media**

Attached are copies of local media coverage and a press release issued by the City of Toledo regarding this project.

## OHIO HISTORICAL RECORDS ADVISORY BOARD

### **Project Expenses**

Include an itemized list of expenditures. Also, provide details about in-kind cost match, including the cumulative total, and the amount of cash match on the project. Cost matches greater than one-to-one are encouraged, but not required.

Copies of invoices, checks and/or receipts should also be sent as a separate attachment.

Julie Gibbons knew the collection of bound plat maps was a trove of information about the history of the city of Toledo and its environs dating as far back as the 1880s.

“I just didn’t want to get rid of them,” she said. “They are beyond cool.”

The clerk of Toledo city council, one of Ms. Gibbons’ duties is to oversee a library of city documents on the 21st floor of One Government Center. That library includes more than 660 pages of plat maps contained in 15 massive bound volumes. Each hand-drawn colored map — carefully mounted on linen pages — meticulously details every parcel of land on each street, sometimes including landmarks and subdivision and owner information.

Ms. Gibbons knew the best way to preserve them and make them easily accessible to the public would be to digitize each and every page. Knowing what to do and finding a vendor to do it, and, more importantly, the money to do it, was a challenge. The pieces to that puzzle fell into place when the Ohio Historical Records Advisory Board awarded the city a \$2,480 grant to preserve and make the historic maps publicly accessible.

Supported in part by funding from the National Historical Publications and Records Commission of the National Archives and Records Administration, the city is working with the Toledo Lucas County Public Library to have the maps unbound, scanned, and made available to the public through a digital archive.

Ms. Gibbons has previously led efforts to preserve and display other key documents, including the city's original charter.

"This grant allows us to preserve an important part of Toledo's history while making it available for future generations to study and enjoy. These maps provide a window into the ambitions, challenges, and growth of our city during a pivotal era," said Laura Shaffer, Toledo's grants coordinator.

At least one historian is excited with the prospect of examining the old maps once the project is complete.

"To an historian, they are priceless," said Ted Ligibel. "In many cases, this might be the only remaining example of a particular map, or the only one in a condition that would allow it to be digitized. Not only does digitization preserve the document so it will not deteriorate quickly, but it also makes a document available worldwide."

Mr. Ligibel is the director emeritus of the Historic Preservation Program at Eastern Michigan University.

"Not a week goes by that I don't jump online to search a local library and access some historical record," he said.

Old maps, especially plat maps or even fire maps — detailed, large-scale street map designed that show the size, shape, construction materials, and use of buildings, along with street names, property boundaries, and water mains — offer a peek at the past that may be unavailable anywhere else.

“They are so loaded with important information on how things were before today. They really are invaluable. We don’t do time machines, so we can’t go back and look at it ourselves,” he quipped. “This is the only way we can get a snapshot of what was happening at a particular time.”

“The availability of a digitized document is important to researchers,” he said. “You don’t have to get on a plane and fly to Seattle or New York or Atlanta, or where a particular archive might be. It really makes the role of the researcher much easier.”

Universities have recognized the proliferation of online databases and their potential value to historical scholars to the point that Eastern Michigan University even offered a class in what is available online, how to access it, and how to verify its accuracy.

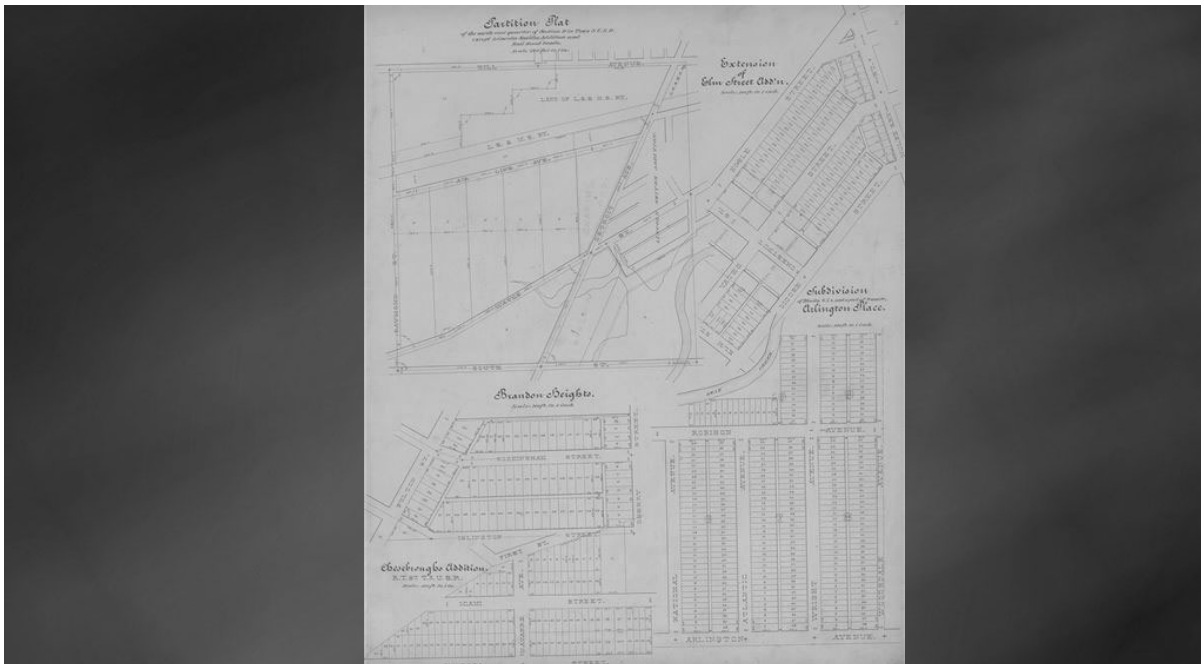

For Ms. Gibbons, the digitization project is a perfect way to handle the old maps.

“It’s a combination of preservation and making the records accessible. John Q. Public can’t just walk in off the streets and say ‘Hey, can I go look in your library?’” she said. “They were in such bad shape, they have to be handled carefully.”

According to Ms. Gibbons, once the project is complete, the digital versions of the maps will likely be available on Ohio Memory, a free digital library that is the result of a joint project between the Ohio History Connection and the State Library of Ohio.

The website, [ohiohistory.org/research/](http://ohiohistory.org/research/), offers access to digital historical materials from cultural heritage institutions across the state.

## City completes digitization of 1880s plat maps

BLADE STAFF

citydesk@theblade.com ✉

MAR 30, 2026

5:34 PM

A project to digitize hand-drawn plat maps of Toledo, some dating to the 1880s, has been completed.

In 2025, the city received a grant from the Ohio Historical Records Advisory Board to make the maps publicly available. Over two dozen of the plat maps have been scanned and are now ready for display, the city announced Monday.

“These representative samples give us glimpses of the past and a chance to explore what the city looked like almost 150 years ago,” Laura Shaffer, grants coordinator, said.

After its incorporation in 1837, Toledo’s early growth was hampered by the region’s swampy terrain. The draining of the Great Black Swamp in the mid-1800s and the introduction of a railroad system fueled a boom that saw Toledo’s population grow by more than 60 percent in just 10 years, creating a need for planned expansion.

“These plats show us the birth of Birmingham and the growth of neighborhoods like Englewood, Junction, the Old West End, and East Toledo,” Ms. Shaffer said. “We can trace the history of Toledo’s transportation manufacturing industry in the ghost neighborhood of Cycledale, now home to the Overland Industrial Park.

“These maps help us to find past connections and reimagine landscapes lost to time and redevelopment,” she said.

The plat maps, preserved with the help of the Toledo Lucas County Public Library and conservation specialists, provide close-up insight into the city’s rapid industrial growth, immigration, and planning.

To explore the maps, visit [toledo.oh.gov](http://toledo.oh.gov) and click on news.

City of Toledo Completes Project to Preserve and Make 1880s Plat Maps Public

Monday, March 30, 2026

In 2025, the City received a \$2,480 grant from the [Ohio Historical Records Advisory Board](#) to make detailed hand-drawn plat maps from the city's early history publicly available. Supported in part by an award from the Ohio Historical Records Advisory Board, through funding from the [National Historical Publications and Records Commission](#), [National Archives and Records Administration](#), this project celebrates Toledo's rich history and the vision of the people who shaped it. Over two dozen of these plat maps have been carefully scanned and are now ready for display.

"These representative samples give us glimpses of the past and a chance to explore what the city looked like almost 150 years ago," Laura Shaffer, grants coordinator, said.

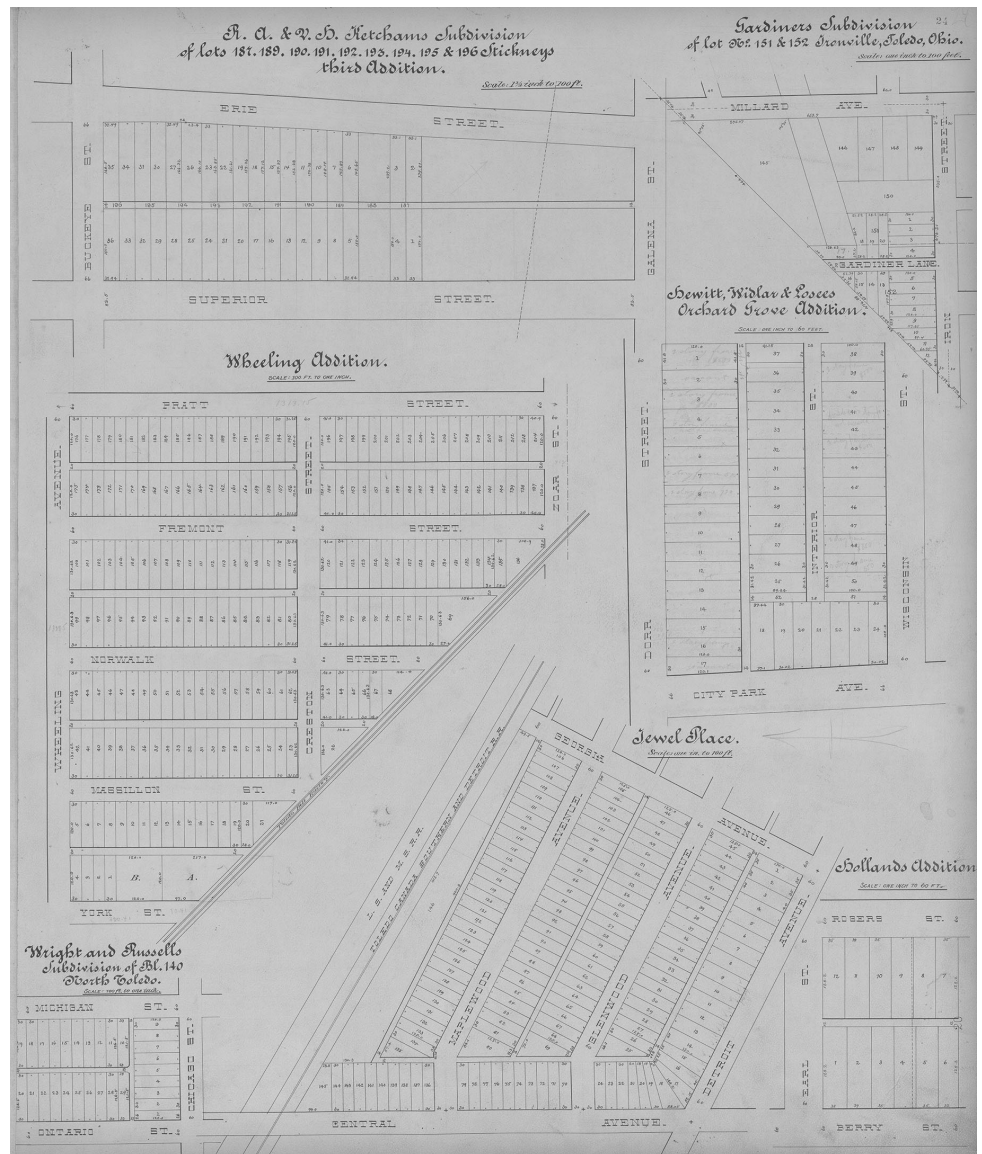

After its incorporation, Toledo's early growth was slowed by travel challenges and swampy terrain. In the mid-1800s, the draining of the Great Black Swamp and the introduction of a railroad system fueled Toledo's first major growth spurt. The City's population grew by 62 percent over that decade, creating an urgent need for planned expansion. "These plats show us the birth of Birmingham and the growth of neighborhoods like Englewood, Junction, the Old West End, and East Toledo.

We can trace the history of Toledo's transportation manufacturing industry in the ghost neighborhood of Cycledale, now home to the Overland Industrial Park. These maps help us to find past connections and reimagine landscapes lost to time and redevelopment. We invite you to peer into the past and imagine what the people who drew them were envisioning for our future," Shaffer said. Many new residents were first- and second-generation immigrants, whose influences are still reflected in Toledo's neighborhoods and culture today. The expansion of several of Toledo's historically significant neighborhoods can be seen in these documents.

Despite setbacks caused by the age and condition of the pages, the project allows the public to explore these maps for the first time. These plats, preserved with the help of the Toledo Lucas County Public Library

and conservation specialists, provide close-up insight into the city's rapid industrial growth, immigration, and planning.

Explore the maps [online](#) to view Toledo's early planning history and imagine the vision behind the city's growth.

Toledo's historic plat maps capture a city in the midst of rapid change. Hand-drawn with remarkable detail, these maps reflect the planning and craftsmanship that shaped Toledo's early neighborhoods and infrastructure.

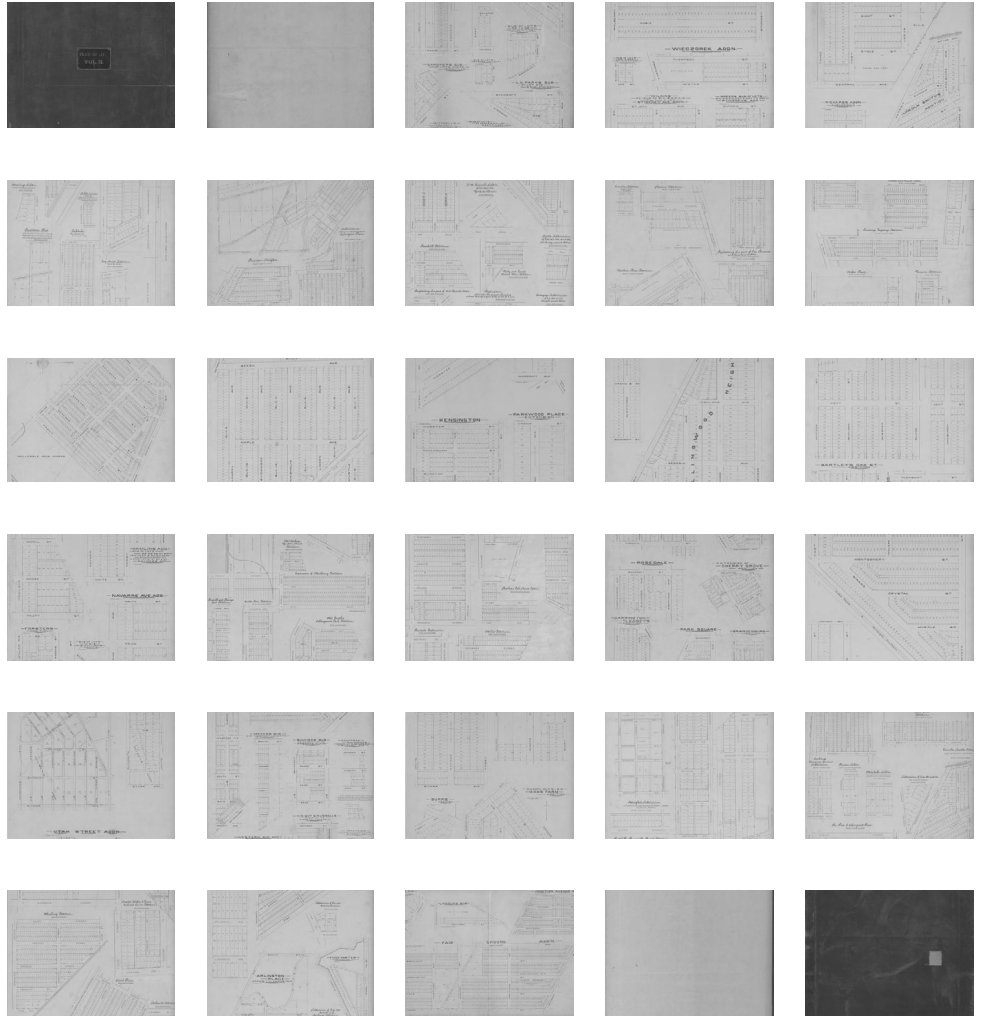

After a slow start due to the challenges of the Great Black Swamp, Toledo's growth accelerated in the mid-1800s with the draining of the land and the arrival of the railroad. By the 1880s, the city had become a major rail hub—second only to Chicago—and its population surged by 62% in a single decade.

These plat maps document how Toledo responded to that growth. Neighborhoods, like the Old West End and Englewood, were expanded and new neighborhoods, like Birmingham, were established to support a rapidly expanding and diverse population, including many immigrants from Germany, Ireland, Poland, and Hungary.

Today, these maps serve as both historical records and works of art—preserving the vision, detail, and ambition that helped shape Toledo.

The work to digitize these Historic Toledo Plat Maps is supported in part by an award from the Ohio Historical Records Advisory Board, through funding from the National Historical Publications and Records Commission (NHPRC), National Archives and Records Administration.
